(54) **CARCINOSTATIC AGENT**

(57)Abstract:

**PROBLEM TO BE SOLVED:** To obtain a carcinostatic agent, capable of manifesting carcinostatic properties and hardly causing adverse effects on human bodies by using a specific crystalline compound belonging to the space group R3c.

**SOLUTION:** This carcinostatic agent comprises a compound represented by the formula {A is an alkali metallic ion, an alkaline earth metallic ion, ammonium ion or H ion; M is a tetravalent metal; (n) is  $0 \leq (n) \leq 61$  (a) and (b) are each a positive number satisfying  $[(a)+(mb)]=1$  [(m) is the valence of A]}, e.g. zirconium phosphate supporting silver. The compound is preferably baked at, e.g. 500-1,300°C and the daily dose thereof for humans is preferably about 0.1-500 mg/kg. The carcinostatic agent is made present in a peripheral part of a lesion and irradiated with visible radiation at  $\leq 600$  nm wavelength.
